

IEA Bioenergy

WEBINAR SERIES

The IEA Bioenergy Roadmap: Delivering Sustainable Bioenergy

February 21, 2018

4:00 pm - 5:00 pm Central European Time
10:00 am - 11:00 am Eastern Daylight Time
3:00 p.m - 4:00 pm Greenwich Mean Time

Pharoah Le Feuvre
Analyst
Renewable Energy Markets
International Energy Agency

Adam Brown
Senior Consultant
Renewable Energy Division
International Energy Agency

Presentation Summary:

Bioenergy is the main source of renewable energy today. IEA modelling also indicates that modern bioenergy is an essential component of the future low carbon global energy system if global climate change commitments are to be met.

Accelerated deployment is urgently needed to ramp up the contribution of sustainable bioenergy across all sectors, notably in the transport sector where consumption is required to triple by 2030. However, bioenergy is a complex and sometimes controversial topic. There is an increasing understanding that only bioenergy that is supplied and used in a sustainable manner has a place in a low carbon energy future. This update of the Technology Roadmap re-examines the role of bioenergy in light of changes to the energy landscape over the past five years and of recent experience in bioenergy policy, market development and regulation. It identifies the technical, policy and financial barriers to deployment, and suggests a range of solutions to overcome them.

IEA Bioenergy, also known as the Technology Collaboration Programme (TCP) for Research, Development and Demonstration on Bioenergy, functions within a Framework created by the International Energy Agency (IEA). Views, findings and publications of IEA Bioenergy do not necessarily represent the views or policies of the IEA Secretariat or of its individual Member countries.
